From The MIT Press : Advances in Automatic Text Summarization (MIT Press) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Advances in Automatic Text Summarization (MIT Press):

1 of 1 people found the following review helpful. error in descriptionBy PrecentrixHow ironic that the (automatic text summarization?) software used by to list products on their website sees the word "summarization" in the title and decides that this is an abridged edition. NOT! Look up the title in Worldcat. That said, this book is a super collection of the most important technical papers on the subject published through 1998, conveniently collected in one volume. An essential introduction to the history, terminology, and many approaches taken to further development of this critical field. Each article includes bibliographical references, and the editors have provided a very helpful

comprehensive index. 6 of 16 people found the following review helpful. *Advances in Automatic Text Summarization* By Taeho Charles Jo Now I need to collect research papers about text summarization. It is happy to find the book including papers about text summarization. I wish this book describes the techniques of text summarization rather than an collection of research papers.

Until now there has been no state-of-the-art collection of the most important writings in automatic text summarization. This book presents the key developments in the field in an integrated framework and suggests future research areas. With the rapid growth of the World Wide Web and electronic information services, information is becoming available on-line at an incredible rate. One result is the oft-decried information overload. No one has time to read everything, yet we often have to make critical decisions based on what we are able to assimilate. The technology of automatic text summarization is becoming indispensable for dealing with this problem. Text summarization is the process of distilling the most important information from a source to produce an abridged version for a particular user or task. Until now there has been no state-of-the-art collection of the most important writings in automatic text summarization. This book presents the key developments in the field in an integrated framework and suggests future research areas. The book is organized into six sections: Classical Approaches, Corpus-Based Approaches, Exploiting Discourse Structure, Knowledge-Rich Approaches, Evaluation Methods, and New Summarization Problem Areas. Contributors : D. A. Adams, C. Aone, R. Barzilay, E. Bloedorn, B. Boguraev, R. Brandow, C. Buckley, F. Chen, M. J. Chrzanowski, H. P. Edmundson, M. Elhadad, T. Firmin, R. P. Futrelle, J.
