Cataloguing and Classification: An introduction to AACR2, RDA, DDC, LCC, LCSH and MARC 21 Standards:

Cataloguing and Classification introduces concepts and practices in cataloguing and classification, and common library standards. The book introduces and analyzes the principles and structures of library catalogues, including the application of AACR2, RDA, DDC, LCC, LCSH and MARC 21 standards, and conceptual models such as ISBD, FRBR and FRAD. The text also introduces DC, MODS, METS, EAD and VRA Core metadata schemes for annotating digital resources. Explains the theory and practice of bibliographic control. Offers a practical approach to the core topics of cataloguing and classification. Includes step-by-step examples to illustrate application of the central cataloguing and classification standards. Describes the new descriptive cataloguing standard RDA, and its conceptual ground, FRBR and FRAD. Guides the reader towards cataloguing and classifying materials in a digital environment.

"...a very good guide for catalogers who are just embarking on their cataloging career." --Technicalities
About the Author: Fotis Lazarinis, PhD, teaches library and information systems as an Adjunct Lecturer in the Department of Computer Science and Biomedical Informatics at the University of Thessaly, and in the Department of Archival and Library Sciences, Ionian University, Greece. His research focusses on information retrieval, organization and sharing using standardized XML structures.
