The latest edition of a cataloging classic, Conversion Tables, 3rd edition includes the 22nd edition of the Dewey Decimal Classification, as well as almost one thousand additional sets of class numbers and corresponding Library of Congress subject headings. Whether used to fill in missing classification numbers or reclassify an entire collection from one class schedule to another, this three volume work offers an affordable and highly effective guide to conversion.This classic cataloging tool has been updated to include the 22nd edition of the Dewey Decimal Classification, as well as almost one thousand additional sets of class numbers and corresponding Library of Congress

subject headings. As with the previous edition, it is arranged in three sections: LC to Dewey, Dewey to LC, and LC subject headings to both. Thus, each volume contains the same list of classifications in the two systems and their corresponding subject headings, but the volumes are arranged differently. Whether used to fill in missing classification numbers or reclassify an entire collection from one class schedule to another, Scott's Conversion Tables work offers an affordable and highly effective guide to conversion, and will save copy catalogers everywhere countless hours of searching to boot!

From Library Journal Scott, the former head of cataloging with the U.S. Census Bureau, has devised truly useful, straightforward tables translating Library of Congress call numbers into Dewey Decimal class numbers and Dewey into LC. Aimed at both converting entire collections and the search for call numbers for individual records, this will prove to be an effective aid for catalogers. Starting with LC numbers in strict order, the Dewey equivalent is listed immediately to the right, followed by a brief, precise descriptor. This process is duplicated for the Dewey numbers. While not as inclusive or descriptive as the actual schedules, the coverage is comprehensive. If more precision is required, the citations will direct catalogers to appropriate areas of the actual schedules. Geographic and other standard extensions are included. This work should also be considered by reference departments for work with patrons familiar with one scheme but not the other. - Rodger Smith, Charleston Cty. Lib., S.C.
