Sherri Brown, Charlie Bennett, Bruce Henson, Alison Valk : SPEC Kit 342: Next-Gen Learning Spaces before purchasing it in order to gauge whether or not it would be worth my time, and all praised SPEC Kit 342: Next-Gen Learning Spaces:

This SPEC Kit explores the configuration and uses of library learning spaces, the developments and transformations that have occurred over the past ten years, and future plans for learning spaces to determine where they are on a continuum between first-gen information commons and next-gen spaces. It explores five main areas related to learning spaces: what kinds of learning spaces currently exist, how these spaces have changed since their inception, and the effects these spaces have had on other library operations; the instruction, programming, and collaboration that take place in the learning spaces; and the current assessment methods for learning spaces and changes that have been made

or are planned based on the results of these evaluations. This SPEC Kit includes examples of learning spaces, instruction spaces, floor plans and maps, marketing for spaces, programs, and instruction, space use policies and procedures, job descriptions and organization charts, and planning and assessment documents.
