**From National Academies Press : Technology for Adaptive Aging** before purchasing it in order to gage whether or not it would be worth my time, and all praised Technology for Adaptive Aging:

Emerging and currently available technologies offer great promise for helping older adults, even those without serious disabilities, to live healthy, comfortable, and productive lives. What technologies offer the most potential benefit?

What challenges must be overcome, what problems must be solved, for this promise to be fulfilled? How can federal agencies like the National Institute on Aging best use their resources to support the translation from laboratory findings to useful, marketable products and services? *Technology for Adaptive Aging* is the product of a workshop that brought together distinguished experts in aging research and in technology to discuss applications of technology to communication, education and learning, employment, health, living environments, and transportation for older adults. It includes all of the workshop papers and the report of the committee that organized the workshop. The committee report synthesizes and evaluates the points made in the workshop papers and recommends priorities for federal support of translational research in technology for older adults.

About the Author Richard W. Pew and Susan B. Van Hemel, Editors, Steering Committee for the Workshop on *Technology for Adaptive Aging*, National Research Council
