Art Bell, Whitley Strieber : The Coming Global Superstorm before purchasing it in order to gage whether or not it would be worth my time, and all praised The Coming Global Superstorm:

1 of 1 people found the following review helpful. Interesting science, with the additional movie clip thrown inBy RockDocI teach earth science, and spend a great deal of time instructing my students on how to critically view the materials they see on tv and in the movies. Most of them have seen the Hollywood sensationalistic movies like Armageddon, The Core, Dante's Peak, and The Day After Tomorrow, but they often have questions about what is fact

and what is fiction for the sake of selling a movie. This book does a good job of explaining the science behind the Great Ocean Conveyor Belt, and how it drives modern climate, and along with the description, it interjects the scenes from the movie, *The Day After Tomorrow*, that are based (sometimes accurately, and sometimes loosely) on those facts. It does digress a bit and talk about ancient civilizations and even postulates a bit about ancient and future life forms, but overall the beginning of the book serves as a good background for anyone interested in the science behind global warming triggering a future ice age due to disruptions in ocean currents. 0 of 0 people found the following review helpful. excellent reading material By Kindle Customer This is a really good book to read with real events that have happened. I have this on my e-reader but needed to have it in hard bound also. 0 of 0 people found the following review helpful. Four Stars By Brett R Rossi It was ok. Informative.

Killer tornadoes. Violent tropical storms. Devastating temperatures. Are these just the prelude to an unprecedented environmental disaster in our near future? Two of America's leading investigators of unexplained phenomena -- Art Bell, the top-rated late-night radio talk-show host, and Whitley Strieber, No. 1 "New York Times" bestselling author of "Communion" and the legendary "Nature's End" -- have made a shocking discovery based on years of research with top scientists and archaeologists from around the world. Now, they reveal what powerful interests are trying to keep hidden: rapid changes in the atmosphere caused by greenhouse gases have set humanity on an incredibly dangerous course toward a catastrophic change in climate in the immediate future. It will begin with a massive, unprecedented storm that will devastate the Northern Hemisphere. This will be followed by floods unlike anything ever seen before -- or perhaps a new Ice Age. They also unearth evidence that this has happened in the past -- in fact, that it has occurred regularly throughout geologic history, but so infrequently that our only record of the last such storm is contained in ancient myths and flood legends. From El Nino to the African droughts, to the shrinking of the polar ice caps, Bell and Strieber identify the warning signs to those willing to see. They point out that the Earth's regulatory system is like a rubber band: you can stretch it just so far before it snaps back -- with a vengeance. Since 1995, each successive year has set new records for violent weather. In 1999 a major climatological study predicted that the Earth will soon be warmer than it has been in millions of years. Bell and Strieber tell us why they believe a rebound is imminent -- a rapid and violent cooling that will cover the Northern Hemisphere in a sheath of choking ice and snow. But it's not too late to reverse our destiny. No mere harbinger of an inevitable doomsday, "The Coming Global Superstorm" is instead a spirited call to action that offers a wealth of viable solutions to this mammoth challenge to humankind. Through a careful and impressively researched dissection of the myths and legends of ancient cultures and an insightful examination of the best of modern environmental science, Bell and Strieber guide us on an intellectual journey as dark as the murky origins of man and as bright as the promise of an interstellar future.

.com It's time to stop talking about the weather and do something about it. Paranormal superstars Art Bell and Whitley Strieber bring environmentalism to the masses tabloid-style in *The Coming Global Superstorm*, a quick look at global warming and its potentially catastrophic effects. Like Old Testament prophets, Bell and Strieber embrace lovingly detailed depictions of global cataclysm; unlike them, our modern-day doomsayers have more to go on than that old-time religion. Their writing is clear and straightforward, interspersing hard data with dramatization and speculation to create an engaging, enjoyable, but thoroughly spooky warning of the next Ice Age. Scoffers would do well to remember the 1900 hurricane that devastated Galveston, Texas, despite the clear warnings--we may have advanced our meteorological knowledge over the 20th century, but is our judgment any better? Bell and Strieber are ultimately optimistic that quick behavior change can avert the big storm for a while, even if archaeological evidence suggests its inevitability. Their solutions range from the small scale (buy fuel-efficient cars) to the grandiose (global cooperation in weather monitoring). Whether their suggestions will help is a moot question (how could we ever know?); surely, though, they won't hurt. --Rob Lightner From Publishers Weekly The message is very scary and convincing: humankind has so polluted the environment that the world's weather is about to react by taking a "ferocious" turn. But the messengers delivering this news seem a bit flaky: Strieber wrote of his own alien abduction episode in *Communion*; Bell, a late-night radio talk-show host, regularly covers such topics as UFOs, government conspiracies and near-death experiences. They present an imagined sequence for the catastrophic "superstorm," threatening a possible "extinction event" for humans. It's like Orson Welles's *The War of the Worlds*, only we're fighting the weather instead of Martians. Interspersed with this alarmist scenario are many credible facts about the effects of trapped greenhouse gasses, as well as explanations of how quickly our ecosystem has deteriorated in this century. Reading, the authors are very grave indeed, lending an otherwise dry scientific topic a heightened sense of drama and making it play as a thriller on tape. Simultaneous release with the Pocket hardcover. (Dec.) Copyright 2000 Reed Business Information, Inc. About the Author Art Bell is one of America's leading talk-radio personalities. His late night broadcasts, *Coast to Coast AM* with Art Bell and *Dreamland*, reach more than 15 million listeners, covering topics ranging from UFOs to government conspiracies, near-death experiences to unexplained phenomena, and more.
