Castro's works, together with Sahlins or Descola, attain one of the most influential fields within the contemporary cultural anthropology especially his contribution to continuing the maxim of anthropology: How are peoples different? This work, a historical review on 16th colonialists' travelogues and other writings, suggests an unseen way of reading "perspectives," a serious question on epistemology and, to my view, a very interesting experiment of thought. His writing style is more than just fine and even easy to follow, which I am actually appreciating.0 of 16 people found the following review helpful. Worst Academic Writing!!By Pumpkin BusterThis is some of the most abstruse pointlessly wordy academic writing I have yet encountered. There may be some interesting stuff burried in there, but it just isnt worth it. If you're a professor, please spare your students this book. It should be nominated for Dennis Dutton's Worst Writing Contest.

At once an anthropological interpretation of historical encounters between Europeans and natives, a critically reflexive approach to anthropological understandings of culture, belief, and identity,' and, perhaps most importantly for scholars working in ia, a highly influential framework through which many ethnographers have come to understand indigenous cosmology and sociality. . . . Viveiros de Castros book has left an important mark on Americanist scholarship in recent years, and its translation should only extend its influence.
