John J. Burke : The Neal-Schuman Library Technology Companion, Fifth Edition: A Basic Guide for Library Staff before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Neal-Schuman Library Technology Companion, Fifth Edition: A Basic Guide for Library Staff:

4 of 4 people found the following review helpful. Very expensive and disappointing. By S. Kelly Quite a mediocre text

that's outdated and lacks the in-depth information you expect in a college textbook. The short sections barely scratch the surface. There's a dearth of URLs, which could point readers to more and better information. This should be an ebook with lots of links and interaction. While I see the need to start at square one, that doesn't mean you finish at square two in a college textbook. There should be more items in the further readings section so at least we're able to find writers who have done a better job. Very expensive and disappointing. 1 of 1 people found the following review helpful. " (41) it would be nice to have it as an eBook version. By Elijah Olson For a technology book that discusses buying eBooks as "freeing [libraries] from buying print copies of technology book titles that become quickly outdated," (41) it would be nice to have it as an eBook version. Seriously. This is especially true because one of the best features of the book are references to other articles and information with web links. If it was an eBook, you could just follow the link directly. With print, you must type in the URL. Also, the price point should be lower than \$75 for a 200 page paperback book. I would never have bought this book, except that it was required for a college course. I'm sorry if you have to buy it. 1 of 1 people found the following review helpful. Not worth it. By Kacy Smith Book is woefully short and filled with only basic information. If you aren't buying this for a textbook, I really don't suggest it at the current price. This product would be much more acceptable at around \$30 to \$40 USD or about half the current cost.

In its new fifth edition, which has been completely updated and reorganized, this one-stop overview of all technologies used in libraries today is more comprehensive and compelling than ever. The perfect primer for LIS students, Burke's guide should also be at the top of the list for any current or future library professional looking to stay at the forefront of technological advancement. It gives readers a sound and sensible way to consider, access, and use library technologies to better meet the needs of library users. Its incisive coverage includes complete analysis of the librarian's technological toolbox for teaching, security, databases, and more; expert advice on how to compare and evaluate competing technology solutions; mobile devices and technology, social media, streaming media, and privacy; makerspaces and other technology programming; updated content on open source catalog systems, discovery layers, and related elements of library management systems; a new section on learning management systems (LMS); websites, web-based services, and free information resources; improved guidance on usability; new technology predictions for the future, with tips on how to stay up to date with the latest developments; and a glossary of useful terms. Informed by a large-scale survey of librarians across the spectrum of institution types, this guide will be a true technology companion to novices and seasoned LIS professionals alike.

"Technology advances at a startling rate, and this book provides a timely overview of what is taking place in libraries. Whether it's staff using ILL programs or learning about free information options, assisting a patron with setting up a digital projector, or teaching someone how to use social media, library staff are the technocentric community option for all people. This information is essential for keeping libraries vital and this should be required reading for all library staff." --American Reference Books Annual "Useful for any library staff, at any level ... It is an excellent overview of library technology, and it is very thorough yet readable." --Journal of Hospital Librarianship

About the Author John J. Burke is Library Director and Principal Librarian for the Gardner-Harvey Library on the Middletown regional campus of Miami University (Ohio). He holds an MS in library science from the University of Tennessee and a BA in history from Michigan State University. Prior to his current position, he gained a tremendous amount of experience with technology in libraries at the University of Cincinnati Raymond Walters College (Ohio) and Fairmont State College (West Virginia). He is a past president of the Academic Library Association of Ohio (ALAO) and a recipient of that organization's Jay Ladd Distinguished Service Award. He is the author of several other books, including four previous editions of *The Neal-Schuman Library Technology Companion: A Basic Guide for Library Staff*. He has presented on a variety of technology topics at conferences hosted by the Association of College and Research Libraries (ACRL) and the American Library Association (ALA), the Library Information and Technology Association (LITA) National Forum, and various regional and state conferences.
