**Elizabeth Haynes, Joanna F. Fountain : Unlocking the Mysteries of Cataloging: A Workbook of Examples (Library and Information Science Text Series)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Unlocking the Mysteries of Cataloging: A Workbook of Examples (Library and Information Science Text Series):

0 of 0 people found the following review helpful. Practice, practice, practiceBy Cinn JennThis book has no lessons, and is strictly practice exercises with the answers included for each exercise. To say there are no lessons, is not completely accurate, because you will certainly learn by doing. It makes a great supplement to library cataloging textbooks.0 of 0 people found the following review helpful. Useful exercises, but poor graphics on some pagesBy

RuthThe examples themselves are fine. The book contains images and descriptions of books, series, electronic and continuing resources. These are real items that can be found in OCLC Connexion. However, I sometimes had difficulty reading the actual print in this book. The images were too small, slightly blurry, etc.0 of 0 people found the following review helpful. Workbook in library catalogingBy Samuel WillisThis book is not for reading; it is for homework, but it is an excellent book for practice in creating library records in accompaniment with access to the rules for AACR2 to which it continually refers. Without these rules, the book is not going to be useful.

Supplementing existing textbooks with exercises that allow practice in description, classification, subject analysis, and MARC 21, this workbook pinpoints problem areas that arise in the cataloging of a wide variety of materials in public, school, special, and academic library settings. Real title pages and other necessary materials are used throughout. AACR2 rule numbers are included, as well as questions for consideration. MARC records are provided for some 50 of 150 exercises. The book companion Web site (<http://www.lu.com/workbook>) has a section for students and a password protected section for instructors who adopt the book for courses. The instructor's Web site includes MARC records for all exercises. This book will appeal to cataloging students as necessary practice for sharpening their skills, as well as to beginning catalogers in the large library environment. It will be a valuable addition as individual study material and for in-house training of catalogers.

"This book of cataloging examples is best suited for, and was intended as a supplement for, a textbook in a cataloging course. Examples are an invaluable source for teaching library science students how to catalog different sources. The cataloging course I took in graduate school had a similar workbook of examples gathered from the professor's everyday work in a large public library. This book would have saved my professor several hours of compiling, reviewing, and copying that information for class each semester." - Reference User Services QuarterlyAbout the AuthorElizabeth Haynes is assistant professor of Library and Information Science at the University of Southern Mississippi, Hattiesburg.Joanna F. Fountain is library science professor, San Jos State University, San Jos, CA; and consultant, Bibliotechnics, Austin, TX; specializing in cataloging for young and bilingual populations (Spanish and English).
