Arlene G. Taylor : Wynar's Introduction to Cataloging and Classification, 9th Edition (Library Science Text Series) before purchasing it in order to gage whether or not it would be worth my time, and all praised Wynar's Introduction to Cataloging and Classification, 9th Edition (Library Science Text Series):

2 of 2 people found the following review helpful. Good Introduction to CatalogingBy ZachI purchased this book as an additional information for my cataloging class and to increase my understanding of cataloging and classification, and I have found it to be quite useful and to be used as a reference to go back to. I have found the examples to be very useful and I tend to agree with the other reviewer here that it should not be a single source of cataloging.I think it's a good introduction to cataloging for beginners and a good reference for experts if ever needed.0 of 1 people found the following review helpful. Item came on timeBy Mikal HemingwayThe item came in the condition that was specified on the product description. I was very pleased with the purchase and shipping method.8 of 8 people found the following review helpful. get Cataloging Classification by Chan insteadBy Joshua WeinerThe book consists largely of reprints out of the AACR2. These are used as examples but its largely to cover up a almost complete lack of explanatory material.I'm sorry I purchased this text and everyone else in my class had similar feelings about the book. It explained almost nothing about the cataloging rules nor did it illustrate why certain cataloging decisions had been made in its examples.Its a good thing the professor is an excellent lecturer or I'd be completely lost.

In this landmark edition of the classic work, Taylor offers practitioners and students of library and information science a complete, up-to-date, and practical guide to the world of cataloging and classification as it stands at the beginning of the twenty-first century. The new edition emphasizes online catalogs and cataloging, with all the attendant terminology. Also included in the work are the 1998 revision of AACR2, MARC 21, the 21st edition of Dewey Decimal Classification, current schedules of the LC Classifications, the latest Library of Congress Subject Headings, and the 17th edition of Sears List of Subject Headings. In addition, Taylor addresses such vital issues as Internet cataloging, international access control, Natural Language Processing, and ontologies. The section of administrative issues has been completely rewritten and suggested readings have been updated in all chapters. A revised glossary provides clear definitions of the terminology needed to master this important field.

"Covers enormous ground in terms of technical information, providing the beginner to intermediate cataloger or library school student with an excellent reference source."-Library Collections, Acquisitions TechAbout the AuthorARLENE G. TAYLOR is professor emerita, School of Information Sciences, University of Pittsburgh, and author of several works on cataloging and classification and authority control. She has received ALA's Margaret Mann Citation in Cataloging and Classification and the ALA Highsmith Library Literature Award.
