**Timothy W. Cole, Myung-Ja K. Han : XML for Catalogers and Metadata Librarians (Third Millennium Cataloging)** before purchasing it in order to gage whether or not it would be worth my time, and all praised XML for Catalogers and Metadata Librarians (Third Millennium Cataloging):

This book provides a foundation of knowledge for catalogers, metadata librarians, and library school students on the Extensible Markup Language (XML)one of the most commonly listed qualifications in today's cataloger and metadata

librarian job postings. Covers XML from basic concepts, such as core syntax and grammar, to advanced topics, such as transformation and schema design Provides an in-depth look at metadata standards used in the library domain, including MARC, Dublin Core, MODS, and others Introduces available XML tools, utilities, and XML related technologies Includes case studies that draw from real-world applications that show how XML is used in library cataloging and metadata workflows

"A good foundation for implementing XML technologies. . . . The included case studies may very well inspire readers to investigate potential projects that expand library services. . . . The inclusion of exercises, topics for discussion, and working examples can be used in a classroom setting. Readers may also use the text for personal study to gain a working knowledge of XML technologies." - ARBA About the Author Timothy W. Cole is mathematics and digital content access librarian; professor of library and information science; and professor, university library, at the University of Illinois at Urbana-Champaign. Myung-Ja K. Han is metadata librarian and assistant professor, university library at the University of Illinois at Urbana-Champaign. She has published papers on metadata quality and bibliographic control in various journals.
